About eHealth Africa

OUR MISSION

eHealth Africa's mission is to build stronger health systems through the design and implementation of data-driven solutions that respond to local needs and provide underserved communities with tools to lead healthier lives.

OUR VISION

Based in Africa, we establish new standards in health delivery and emergency response through the integration of information, technology, and logistics.

OUR VALUES

Impact and Quality: We push ourselves to maintain high standards ensuring that we produce the most meaningful results in everything we do, no matter how big or small.

Innovative Problem Solving: We maintain a world view driven by possibilities, not limitations. We take smart risks and foster an environment where creativity and innovation thrive.

Integrity: We are honest and truthful in our work. We always do what is right, even when it is not easy. We put our values into practice and hold each other accountable.

From the Executive Director

2023 is another epic year for eHealth Africa and I couldn't be more honored to take over the mantle of leadership as the Executive Director. Recent years have seen the organization evolve beyond its limit, breaking new grounds and leading lifesaving interventions.

This year no doubt witnessed official transitions with daring impact across various sectors. However, the unwavering and empathetic support of the organization's leadership team, Board of Directors, partners & donors, coupled with the resilience of staff were instrumental in the achievement of key milestones this year. The number of institutions and by extension the communities reached during the year is indeed overwhelming but we remain determined to raise the level further as the coming years promises to be more impactful.

Having significantly contributed to the eradication of Polio in Nigeria, this year see us taking additional steps to lead public health laboratory strengthening to improve early detection of the Circulating Variant Polio Virus 2 (CVPV2). Also, expanding our coast by building and managing more Emergency Operation Centers both in Nigeria and other parts of the continent is another huge manifestation of both intellectual and technical expertise that we bring to the public health sector.

Also, beyond delivering vaccines to the last mile, we are able to track vaccine teams using Geospatial Tracking Systems, to ensure inhabitants in remotest of locations access healthcare. Also, we are honored to lead the building and managing of Public Health Infrastructures across Nigeria and Africa to support planning, coordination, and effective data utilization to strengthen health institutions.

While we do not underrate the magnitude of our impact, we remain humble and willing to take more giant strides to break even more glass ceilings in the coming years.

The coming years will see us relentlessly going beyond geographical boundaries to expand healthcare access to underserved regions, leveraging innovative technologies and strategic partnerships to bridge the gap between communities and quality care. Through education, advocacy, community engagement and sustainable interventions, We will empower communities to take charge of their health and make informed decisions to lead healthier lives.

From the Executive Director /Cont'd

You can look forward to groundbreaking health solutions through innovative research in our sustained drive to address evolving health challenges facing Africa. Through capacity building, infrastructure development, and strategic planning, we will work hand in hand with local governments, organizations, and stakeholders to build resilient healthcare systems that can withstand challenges and thrive in the face of adversity.

We humbly appreciate the priceless support of partners, donors, Federal and State Ministries and Agencies for the opportunity to continue to play such a crucial role in Nigeria and Africa's public healthcare.

Once again, I appreciate the Board of directors for the opportunity and confidence bestowed on me to lead this talented and dynamic team. I am optimistic that, with your amazing thought leadership and this effervescent team, we will raise the bar higher!

Cheers to more positive impact!

Atef Fawaz
Executive Director,
eHealth Africa

Key Achievements in 2023

1458 consignments managed in Ngala warehouse | **888** consignments managed in Dikwa warehouse

2,024 Partners Utilized PEOC in 2023 | **1,873** Public Health Emergency Meetings Supported

5,801,209 potent vaccines delivered + **4,164,376** dry goods to 351 facilities across the 23 LGAs in Sokoto State.

29,052

Missed Settlements Identified: Highlighting areas for increased focus in future vaccination campaigns.

30,084

Vaccination Teams Tracked: In the GTS project, ensuring no child is missed in Polio campaigns.

+13 laboratory sites got fully equipped by eHA
+08 Laboratory Sites Provided With Consumables:

117,660

Settlements Visited by GTS: Achieving 80% coverage of planned settlements, significantly improving vaccination reach.

Public Health Emergency Management

Polio Emergency Operations Centers (PEOCs)

Project Overview and Objective:

The Polio Emergency Operations Center (PEOC) project is primarily focused on enhancing coordination, transparency, accountability, and efficiency among various stakeholders involved in Polio eradication efforts in Nigeria. The project's core objective is to streamline operations and foster a collaborative environment conducive to the elimination of the Circulating Variant Polio Virus Type 2 (cVPPV2).

Achievement and Impact:

Diverse Meetings Supported: In 2023, the PEOC was used by 2024 partners and government agencies to hold Meetings and plan for Campaign sessions.

New EOC Sites: Establishment of three new EOC sites in Kebbi, Niger, and Zamfara States.

Wide Utilization: the EOC hosted 2379 other meetings, highlighting its versatility.

Skill Development: Notably, 45.9% of EOC staff exhibited increased skills in EOC operations and administrative functions.

Meeting and Campaign Support: eHealth Africa supported 1,873 Public Health Emergency meetings, 204 campaigns, 329 Polio campaign meetings, and 901 Polio Emergency meetings held in the EOC

Operational Support: Successfully completed all supporting activities, including procurement, campaigns, meetings, training, and services, ensuring the EOCs remain functional and well-maintained.

The PEOC project represents a significant advancement in Nigeria's ongoing battle against the vaccine-derived Polio, providing a robust platform for efficient and coordinated eradication efforts, and setting a precedent for similar public health initiatives.

Governor Dauda Lawal of Zamfara State cutting the ribbon at the handover ceremony of the Zamfara Emergency Operations Center to the government.

Alhaji Safiyu Garba Bena, Head of Service in Kebbi State, representing Governor Abubakar Atiku Bagudu, cuts the ribbon at the handover ceremony of the Kebbi State EOC.

eHealth Africa's Kazeem Balogun and Abubakar Shehu pay a courtesy visit to the Emir of Argungu, Alhaji Sama'ila Muhammad Mera, ahead of the Kebbi State EOC handover ceremony.

Support to Polio Outbreak Control Rooms in Africa(POCRs)

Project Overview and Objective:

The Polio Outbreak Control Rooms (POCRs) Project is a strategic initiative designed to bolster the ability of governments across Africa to combat Polio and other vaccine-preventable diseases. This is achieved through the establishment of Polio Outbreak Control Rooms and providing other relevant support as needed. The project's overarching aim is to enhance the responsiveness and effectiveness of health systems in managing and preventing polio outbreaks and other vaccine-preventable diseases. The POCR project is a critical component in the global fight against Polio, significantly contributing to the eradication efforts and enhancing the capacity of African nations to manage public health challenges effectively.

Disease Prevention and Monitoring

Polio GIS Special Intervention

Project Overview and Objective:

The Polio GIS project was initiated to bolster the efforts of the Government and Polio Eradication Initiative partners in combating the spread of Circulating Variant Polio Virus Type 2 (cVPPV2). Targeting eight priority states - Borno, Katsina, Kebbi, Kaduna, Niger, Sokoto, Yobe, and Zamfara - the project aimed to ensure comprehensive coverage by vaccination teams, particularly in settlements facing security challenges and those difficult to access. Key objectives included updating and managing the Master list of Settlements (MLOS), developing micro plan templates, training local teams, tracking vaccination efforts in real-time, and conducting geospatial post-implementation coverage analysis.

Achievement and Impact:

Creation of detailed ward-level maps for each polio campaign round facilitated targeted micro-planning across the priority states.

eHA collected and updated geo-coordinates for 5927 settlements.

eHA supported campaign tracking in the Kaduna, Katsina, Kebbi, Niger, Sokoto, Yobe, and Zamfara states

Identified 4,099 settlements that accounted for identification of 29% of the missed settlements across the states and tracked 1,200 wards in 196 LGAs using GTS.

eHA trained 194 coordinators on GIS tracking across the project states of implementation

The Polio GIS Special Intervention project represents a pivotal advancement in utilizing technology to enhance the effectiveness of vaccination campaigns, particularly in challenging and inaccessible areas. Its success lays a robust foundation for not only continuing the fight against polio but also for addressing other public health challenges with similar logistical complexities.

Enhancing data collection and reporting to support decision-making by partners.

eHA LGA Consultant training a WFP on tracker handling in Zaria

Evening Review Meeting at Chikun LGA in Kaduna State

Technical Assistance for COVID-19 Vaccine Deployment

Project Overview and Objective:

The project focused on providing technical assistance for the effective deployment of COVID-19 vaccines. Its primary objectives included setting up an optimal management structure for the COVID-19 vaccination program, strengthening the existing management capacities, and enhancing the use of current platforms for planning, coordination, and strategy implementation.

Achievement and Impact:

The project has realized significant achievements and impacts in facilitating the COVID-19 vaccine rollout:

Supporting Strategic Meetings:

Facilitated 502 State Emergency Routine Immunization Coordination Centre (SERICC) and other Technical Working Group (TWG) meetings across 18 supported states, enhancing the coordination and strategy of vaccine deployment.

- Supported the teams to ensure that 250 meetings were held with evidence of meeting reports using the archival system
- Out of the 597 recorded decisions or actions taken at the TWG meetings, 541 of these actions were implemented from the decisions made at the TWG meetings
- eHA facilitated 185 data driven presentations
- Developed and administered a performance assessment for PHCs in the 18 states
- Out of the 96 prioritized items on the workplan, eHA 82 of these items were achieved within the set timeline.
- eHA supported the creation of 59 products like microplans, rollout plans, etc.
- Finalized and distributed findings from client-led monitoring, providing valuable insights for improving vaccine delivery processes.
- Supported COVID-19 vaccine ramp-up, resulting in approximately 12,892,858 individuals being vaccinated.
- Conducted successful close-out meetings by leveraging SERICC and TWG meetings across the 18 states, ensuring a structured and efficient conclusion to the project phases.
- The project conducted a Most Significant Change evaluation at endline. The key results show that the TA Assistance improved COVID-19 planning and coordination, increased data use for decision making and institutional strengthening. In addition, there was a significant evidence that the TA efforts with the TWGs contributed in increased COVID-19 vaccination in the project implementation states.

Geospatial Tracking System (GTS) Project

Project Overview and Objective:

The Geospatial Tracking System (GTS) project, implemented by eHealth Africa, is a critical initiative aimed at supporting polio immunization efforts across Nigeria, particularly in the fight against the circulating Variant Polio Virus2 (cVPV2). Despite Nigeria being declared Wild Polio Virus (WPV) free in August 2020, the threat of cVPV2 persists. The GTS project works in tandem with The National Primary Health Care Development Agency (NPHCDA), WHO, UNICEF, and Global Polio Eradication partners. The primary goal of this innovative endeavor is to ensure that no child is missed during vaccination campaigns, leveraging GIS tracking and meticulous data collection to guide health workers to every settlement, including remote locations.

Esther, the EHA Project Field Officer in Sokoto State, activates tracking devices to be distributed to ward focal persons at the start of their day in Bodinga LGA, Sokoto.

Funke Ibikunle, an eHA field officer, assists an FIPV Vaccinator with arranging vaccines and explains the function of the tracking device at Nufawa, Sokoto North LGA, Sokoto State.

Saadatu Atiku, a house-to-house mobilizer, displays the GIS tracking app on her phone, used to monitor her coverage areas in Yabo LGA, Sokoto State.

Achievement and Impact:

Extensive Team Tracking: Out of the **146,712** settlements planned to be visited, **117,660** settlements were visited. This accounted for 80% of the planned settlements visited. At least **1,449,937** children were identified as having missed settlements.

Geocoding in Key States: eHA identified **29,052** missed settlements, accounting for an average of 20% of settlements. eHA identified **62,793** settlements without geocoordinates and conducted data collection activities to update **53,952** (86%)

Improved Vaccination Coverage: Children planned to be vaccinated were **15,996,679**. For the actuals, **14,634,749** children were vaccinated, accounting for 91% of the planned target. The vaccination teams of **30,084** tracked campaigns in **2550** wards in **247** LGAs.

Scale Up of Electronic Management of Immunization Data System

Project Overview and Objective:

The project aimed to develop and implement a new native Electronic Management of Immunization Data (EMID) system in Nigeria. Key objectives included:

- Developing the EMID system suitable for local healthcare requirements.
- Conducting cascade training across all 36 states and the Federal Capital Territory (FCT) in Nigeria.
- Carrying out IT infrastructure upgrades at the NPHCDA annex in Abuja.

Achievement and Impact:

The project has successfully achieved its objectives, with significant impacts observed in the health data management sector:

Development and Deployment:	The new native EMID system was successfully developed and deployed. This includes the Pub Reg, Verification portal, and EMID backend to the production instance.
Training and Capacity Building:	Conducted refresher and supervision training of 10075 participants across 36 states plus FCT in Nigeria, enhancing the skills and knowledge of healthcare workers in using the EMID system.
Support for Routine Immunization (RI) Progressive Web App (PWA):	The project provided essential support in the planning and execution of the RI PWA, facilitating better management of routine immunization data.
IT Infrastructure Enhancement:	Completion of the Airtel E1 link setup and transitioning all agents to the new 3CX setup significantly improved the IT infrastructure.
Hand Holding and Support	Conducted final hand holding sessions on Helpdesk support for National Primary Health Care Development Agency (NPHCDA) staff, ensuring effective use and maintenance of the system.
Maintenance and Enhancements:	Ongoing maintenance and bug fixing on the EMID Native app, PubReg, Verification Portal, and EMID Backend, along with enhancements like image URL link on DHIS and language conversion on PubReg, have improved system reliability and user experience.
EMID Routine Immunization Requirements:	Completion of requirements for EMID Routine Immunization, enhancing the efficiency and effectiveness of immunization data management.

State Training of Trainers session in Ebonyi State, featuring EMID State focal persons and health workers.

State Training of Trainers session in Nassarawa State, featuring EMID State focal persons and health workers.

State Training of Trainers session in Kogi State, featuring EMID State focal persons and health workers.

Vaccine Direct Delivery (VDD)

Project Overview and Objective:

The Vaccine Direct Delivery (VDD) project, initiated by eHealth Africa (eHA), embodies the organization's commitment to developing people-centric and data-driven technological solutions aimed at enhancing health delivery systems for vulnerable communities. VDD is designed as a third-party logistics (3PL) service, ensuring the efficient and timely delivery of vaccines and dry commodities from state cold stores directly to health facilities at the ward level across operating states. Leveraging eHA's proprietary LoMIS Deliver application and dashboard, the project streamlines operational planning, data management, and visualization. The primary goals of the VDD project include:

- Ensuring the timely delivery of potent vaccines to Cold-chain-equipped health facilities.
- Improving the availability of vaccines at health facilities for Routine Immunization (RI). This invariably eliminates stockout of vaccines at primary healthcare facilities.

The Vaccine Direct Delivery project represents a significant stride towards improving vaccine availability and ensuring the health of children in vulnerable communities. Through innovative logistics solutions and data-driven approaches, eHA is set to continue making a profound impact on public health infrastructure and immunization programs.

Achievement and Impact:

5,801,209 + **10,245,626**
potent vaccines + dry goods
to 351 facilities across
the 23 LGAs in Sokoto State.

The Executive Secretary of Sokoto State Primary Health Care Development Agency (SPHCDA) receives a certificate and performance award in recognition of outstanding service on the VDD project.

An eHealth Africa health delivery officer from the VDD project conducts a detailed inventory and completes the sign-off process following deliveries.

An eHealth Africa health delivery officer from the VDD project en route to hard-to-reach areas for essential deliveries.

Safety and Antimicrobial Resistance of Mass Administration of Azithromycin on Children 1-11 months in Nigeria [SARMAAN]

Project Overview and Objective:

The Safety and Antimicrobial Resistance of Mass Administration of Azithromycin on Children 1-11 months in Nigeria (SARMAAN) Project aims to provide critical evidence and understanding of the effects of mass administration of azithromycin in reducing mortality in infants. This project is pivotal in potentially improving child survival rates in Nigeria by assessing the impact of this widespread antibiotic use on children between 1 months to 59 months by extension.

Achievement and Impact:

Supported joint **state-level training** for data collectors on the use of electronic data collection (ODK form) for the project

The SARMAAN Dashboard set up eHealth Africa has become a vital tool for decision-making, used by **10 stakeholders** and partners

There have been **1500** visits by state stakeholders and implementing partners to the dashboard, underscoring its significance in guiding decision-making processes.

WFP Accelerator Sprint (LoMIS)

Project Overview and Objective:

The WFP Accelerator Sprint Logistics Management Information Systems (LOMIS) project focuses on the optimization of a digital solution designed to prevent stock-outs at last-mile facilities. By integrating the stock and delivery components of LOMIS, the project aims to enhance the management and delivery of vaccines and other health supplies in healthcare facilities. Key objectives include:

- Scale-up the LoMIS solution by integrating its two main components, LoMIS Deliver and Stock.
- Enhance the automation and advanced analytic capabilities of the LOMIS solution.
- Complete configurations and app development for the integrated LOMIS solution.
- Finalize capacity-building sessions for healthcare workers on the use of LoMIS.
- Complete advocacy engagements to promote the adoption and utilization of LoMIS.

Expected Achievement and Impact

- Improved Supply Chain Efficiency - leading to more efficient management and delivery of health supplies.
- Reduction in Stock-Outs - reduce the occurrence of stock-outs at last-mile facilities, ensuring the continuous availability of essential healthcare products.
- Enhanced Healthcare Services - an improvement in the overall quality of healthcare services.
- Advocacy and Adoption - potentially setting a standard for logistics management in healthcare.

Laboratory Systems & Diagnostics

Support for Laboratory Supplies Procurement

Project Overview and Objective:

The Support for Laboratory Supplies Procurement Project, in collaboration with the World Health Organization AFRO, aims to strengthen the capabilities of the Global Polio Laboratory Network (GPLN) labs. This project's primary objective is to equip these laboratories for robust and rapid sample analysis for polio detection and to enhance their sequencing capabilities.

Achievement and Impact:

The project has achieved significant milestones in upgrading infrastructure and procuring essential equipment for various laboratories across Africa. The key achievements and their impacts are as follows:

The long-term impacts include: Enhanced Laboratory Capacity, Increased Polio Surveillance, Advanced Research Opportunities, Regional Health Security, and Sustainable Health Infrastructure. These advancements are crucial in the global fight against polio and in strengthening health systems across Africa.

Innovation Project: Best Pitch Award 2023

Digitising for Impact, Improving Access to Integrated Services for NCDs in Nigeria" (DIIAN)

Project Overview and Objective:

In the eHA board's effort to promote innovative ideas and creative solutions to solve public health needs and have varied evidence to demonstrate eHA's capacity and use cases for innovative ideas, launched an inaugural Board Innovation Context in 2023.

Three teams participated in the context, with problem analysis using different problem-solving tools to develop an innovation concept paper. The groups include; Neonatal Sepsis, Paediatric, and Noncommunicable Disease (NCD) groups. The context started in July with a series of research, desk reviews, and interactive sessions. It concluded with final presentations at the grand finale on 11th October 2023 with the NCD emerging as the winner and awarded "The Best Pitch Team 2023". The NCD team presented an innovative Project titled Digitising for Impact, Improving Access to Integrated Services for NCDs in Nigeria" (DIIAN). The project's overall goal is to improve community access to Hypertension and Diabetes services in the FCT and Kano state, using the WHO/Nigeria Package of Essential Noncommunicable Disease interventions (PEN). Preliminary activities have started and progress made on the work plan.

The Nigerian PEN adapted from the WHO Package of Essential Noncommunicable Disease Interventions is a cost-effective intervention for Primary healthcare in low-resource settings that can be delivered with an acceptable quality of care.

Deploying a stepwise approach to the implementation of the PEN as described by WHO, the project will adhere to the Framework which includes, Engaging stakeholders, Assessing the current status of NCDs, Developing a service model for community intervention, conducting capacity building, Monitoring and Evaluation and the Review and plan for scale-up.

Expected Outcome

- Increased number of individuals with access to Hypertension and Diabetes services (UHC)
- Community Health Extension Workers (CHEWs) and project staff trained on Nigeria Package of Essential Noncommunicable Disease interventions
- Improve Hypertension and Diabetes services data

Atef Fawaz, Executive Director of eHealth Africa, and members of the board celebrates with the DIIAN project team after receiving the best pitch award for 2023.

Andrew Karlyn, member of the eHealth Africa's Board, presenting the DIIAN project team with the best pitch award for 2023.

Climate Adaptation in Health, Food Security & Nutrition

Third Party Advocacy

Project Overview and Objective:

The Third Party Advocacy project, supported by the Global Alliance for Improved Nutrition (GAIN), was initiated to enhance the country's ability to generate, govern, share, and utilize traceable data on food fortification within factories and markets. This initiative was specifically aimed at supporting and strengthening Large Scale Food Fortification (LSFF) third-party advocacy campaigns and contributing to the overall achievement of LSFF program goals.

Achievement and Impact:

The project has successfully achieved several key milestones, each contributing significantly to the improvement of data management in food fortification:

Data Review and Cleanup: Conducted a thorough review of existing data and sent cleaned data queries to GAIN (Global Alliance for Improved Nutrition), ensuring data accuracy and reliability.

1

2

Data Analytics Plan: Formulated and approved a comprehensive data analytics plan, laying the groundwork for systematic data analysis and utilization.

LSFF Data Module Development: Developed and approved an LSFF data module, a crucial tool for standardizing and streamlining data collection and management processes related to food fortification.

3

4

Approval and Implementation of LSFF Data Module: Finalized and began the use of the LSFF data module, marking a significant step forward in data management for food fortification.

Development of a Data Visualization Dashboard: Created a dashboard for data visualization, enabling easier interpretation and analysis of food fortification data.

5

6

Development of communication collaterals: Provided support to the team to create three communication collaterals.

The accomplishments of the Third Party Advocacy project open several avenues for future development and impact: Enhanced Data-Driven Decision Making, Scalability of Data Tools, and Improved Advocacy and Policy Influence.

Common Storage Service in Ngala and Dikwa, Borno State

Project Overview and Objective:

The project, supported by the World Food Program (WFP), involves warehouse operations in North-East Nigeria, providing a common storage facility for humanitarian actors. This initiative is designed to strengthen humanitarian responses in hard-to-reach areas, with eHealth Africa tasked with managing these warehouse facilities.

The Common Storage Service project in Ngala and Dikwa, Borno State, has demonstrated significant impact in enhancing the efficiency and effectiveness of humanitarian aid delivery in challenging environments. The project's achievements provide a solid foundation for future initiatives aimed at bolstering humanitarian logistics and responses.

Achievement and Impact:

Parameters	Ngala	Dikwa
 Weight of items handled	1985.25 metric tonnes	2403.45 metric tonnes
 Volume of items handled	11415.6 cubic meter	6411.19 cubic meter
 Number of Consignments Handled	1458	888
 Number of iNGOs + Partners using the Facility	13	180

Testimonials

“This is the first time I will get payment immediately after training, not waiting weeks or months later or in some cases you never get paid even though there were promises.. A big thank you to your organization’.-
EMID User acceptance training participant, Owerri, Imo, Nigeria

“... next time the recorders are aware that it is eHealth that wants to train they will joyfully come out without hesitation and this proves that the recorders will participate effectively during the pilot.”.
- State EMID Focal Staff

“VDD data is very reliable and is the primary source of our data” -
Solina RI Consultant, Sokoto

“The Kano hub enabled us to deliver food in 19 days on average, instead of the three months needed for conventional procurement”.
- WFP's Head of Supply Chain

“I had little experience coordinating in multi-agency centers like the EOC before my involvement. This is where people from different organizations and institutions come together, work together, and make decisions together. For me, it has been a very worthwhile experience. My life has been changed for the better by it. Over the years, I have learned and experienced so much. In any endeavor, I am now confident that I can face and overcome any challenge”.
-Incident Manager of Katsina EOC

We believe everyone deserves access to tools for a healthier life. We value honesty, making an impact, and finding innovative solutions to problems.

Forum 2023

Insights Learning Forum 2024

SCAN QR CODE TO LEARN MORE

Insights Learning Forum

Insight Learning Forum, is an annual country digital health learning event that brings together professionals and practitioners in the digital and public health sectors to share experiences, insights, and knowledge regarding the use of digital health innovations in public health implementation. The Forum is borne out of *Insights by eHA*; a successful knowledge-based and ideation webinar series for the past year, providing valuable insights and discussions on various topics related to digital health, data driven solutions and innovations in Public Health practice.

The maiden edition with the theme; "**Digital Innovations in Public Health Practice: Lessons and Impacts**" focuses on digital health innovations and how they impact on healthcare delivery while mainstreaming the importance of integration and institutionalization of the innovations. The forum also provides an avenue to present and showcase digital solutions that they may have employed in the past or are planning to use in the future and to also ensure cooperation between different organizations to breed success in the field.
